3 Description	Circuit Diagram
<p>GTXU0101 is a single-bit, dual-supply noninverting fixed direction voltage level translation device. A pin is referenced to <math>V_{CCA}</math> logic level, OE pin can be referenced to either <math>V_{CCA}</math> or <math>V_{CCB}</math> logic levels, and B pin is referenced to <math>V_{CCB}</math> logic level. The A port is able to accept input voltages ranging from 1.65 V to 5.5 V, while the B port can also accept input voltages from 1.65 V to 5.5 V. Fixed direction data transmission can occur from A to B or B to A when OE is set to high in reference to either supply. When OE is set to low, B pin is in the high-impedance state.</p>	 <p>The diagram shows a functional block diagram of the GTXU0101. It features three main input pins: OE, A, and B. The OE pin is connected to a pull-down resistor and a Schmitt-trigger inverter. The A pin is connected to a pull-down resistor and a Schmitt-trigger inverter. The B pin is connected to a Schmitt-trigger inverter. The circuit is powered by two supply rails: <math>V_{CCA}</math> and <math>V_{CCB}</math>, with a common ground (GND). The output of the circuit is labeled BY. The diagram is enclosed in a dashed box.</p> <p><b>Functional Block Diagram</b></p>

#### 4 Revision History

Revision	Date	Note
Rev. A1.0	2024.07.23	Original Version

The latest datasheet version should be checked on the GTIC official website, as the company does not actively inform customers about updates to the datasheet.

## 5 Device Summary, Pin and Packages

Table 5-1. Device Summary<sup>(1)</sup>

Serial Name	Part Name	Package	Body Size (Nom)	Marking <sup>(2)</sup>	MSL <sup>(3)</sup>	Package Qty
GTXU0101	GTXU0101S6	SOT23-6	2.92mm×2.80mm	0101 XXXXX	3	Tape and Reel,3000

(1) For all available packages, please contact product sales.

(2) There may be additional marking, which relates to the lot trace code information (data code and vendor code), the logo or the environmental category on the device.

(3) MSL, The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications.

(4) "XXXXX" in Marking will be appeared as the batch code.

**5 Device Summary, Pin and Packages(Continued)**

**Fig.5-1. GTXU0101: S6 (SOT23-6) Package**

**Table 5-1 Pin Definition**

Pin		I/O	Description
Name	S6		
A	3	I	Input A Referenced to $V_{CCA}$ .
BY	4	O	Output BY. Referenced to $V_{CCB}$ .
GND	2	-	Ground
OE	5	I	Output Enable. Pull to GND to place output in high-impedance mode. Pull to $V_{CCA}$ or $V_{CCB}$ to enable all outputs.
$V_{CCA}$	1	-	A-port supply voltage. $1.65\text{ V} \leq V_{CCA} \leq 5.5\text{ V}$
$V_{CCB}$	6	-	B-port supply voltage. $1.65\text{ V} \leq V_{CCB} \leq 5.5\text{ V}$

\* It is suggested to leave the unconnected pins floating.

## 6 Voltage, Temperature, ESD and Thermal Ratings

### 6.1 Absolute Maximum Ratings<sup>(1)</sup>

Parameters		Min.	Max.	Unit
V <sub>CC</sub>	Supply voltage range	-0.5	6.5	V
V <sub>I</sub>	Input voltage range <sup>(2)</sup>	-0.5	6.5	V
V <sub>O</sub>	Voltage range applied to any output in the high-impedance or power-off state <sup>(2)</sup>	-0.5	6.5	V
V <sub>O</sub>	Voltage range applied to any output in the high or low State <sup>(2)(3)</sup>	-0.5	V <sub>CC</sub> +0.5	V
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0	-50	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0	-50	mA
I <sub>O</sub>	Continuous output current		±50	mA
	Continuous current through V <sub>CC</sub> or GND		±100	mA
T <sub>J</sub>	Junction temperature	-55	150	°C
T <sub>stg</sub>	Storage temperature	-55	150	°C

(1) Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input and output negative-voltage ratings may be exceeded if the input and output current ratings are observed.

(3) The output positive-voltage rating may be exceeded up to 6.5 V maximum if the output current rating is observed.

### 6.2 ESD Ratings

ESD		Value	Unit
V(ESD)	Electrostatic discharge	Human-Body Model (HBM) <sup>(1)</sup>	8 K
		Charged-Device Model (CDM) <sup>(2)</sup>	2 K

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

## 6 Voltage, Temperature, ESD and Thermal Ratings(Continued)

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup> <sup>(2)</sup> <sup>(3)</sup>

Parameter	Conditions		Min	Max	Unit
V <sub>CCA</sub>	Supply voltage A		1.65	5.5	V
V <sub>CCB</sub>	Supply voltage B		1.65	5.5	V
I <sub>OH</sub>	High-level output current	V <sub>CCO</sub> =1.65 V		-4.5	mA
		V <sub>CCO</sub> =2.3 V		-8	
		V <sub>CCO</sub> =3 V		-10	
		V <sub>CCO</sub> =4.5 V		-12	
I <sub>OL</sub>	Low-level output current	V <sub>CCO</sub> =1.65 V		4.5	mA
		V <sub>CCO</sub> =2.3 V		8	
		V <sub>CCO</sub> =3 V		10	
		V <sub>CCO</sub> =4.5 V		12	
V <sub>I</sub>	Input voltage <sup>(3)</sup>		0	5.5	V
V <sub>O</sub>	Output voltage	Active State	0	V <sub>CCO</sub>	V
		Tri-State	0	5.5	V
T <sub>A</sub>	Operating free-air temperature		-40	125	°C

(1)V<sub>CCI</sub> is the V<sub>CC</sub> associated with the input port.

(2)V<sub>CCO</sub> is the V<sub>CC</sub> associated with the output port.

(3)All control inputs and data I/Os of this device have weak pulldowns to ensure the line is not floating when undefined external to the device. The input leakage from these weak pulldowns is defined by the I<sub>I</sub> specification indicated under Electrical Characteristics.

## 7 Electrical Specifications

### 7.1 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

Parameter		Test Conditions	V <sub>CCA</sub>	V <sub>CCB</sub>	Operating Free-air Temperature (TA)			Unit
					-40°C to 125°C

Fig.8-2. Typical ( $T_A=25^\circ C$ ) Output Low Voltage ( $V_{OL}$ ) vs Sink Current ( $I_{OL}$ )

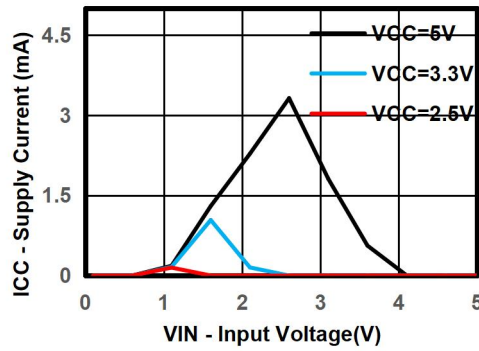

Fig.8-3. Typical ( $T_A=25^\circ C$ ) Supply Current ( $I_{CC}$ ) vs Input Voltage ( $V_{IN}$ )

## 9 Parameter Measurement Information

Parameter	V <sub>CCO</sub>	R <sub>L</sub>	C <sub>L</sub>	S1	VTP
T <sub>pd</sub> Propagation delay time	1.65V-5.5V	10 kΩ	5 pF	Open	N/A
T <sub>en</sub> , T <sub>dis</sub> Enable time, disable time	1.65V-2.7V	10 kΩ	5 pF	2 x V <sub>CCO</sub>	0.15V
	3.0V-5.5V	10 kΩ	5 pF	2 x V <sub>CCO</sub>	0.3V
T <sub>en</sub> , T <sub>dis</sub> Enable time, disable time	1.65V-2.7V	10 kΩ	5 pF	GND	0.15V
	3.0V-5.5V	10 kΩ	5 pF	GND	0.3V

1. V<sub>CC1</sub> is the supply pin associated with the input port.
2. V<sub>OH</sub> and V<sub>OL</sub> are typical output voltage levels that occur with specified R<sub>L</sub>, C<sub>L</sub>, and S1.

1. V<sub>CC1</sub> is the supply pin associated with the input port.
2. V<sub>OH</sub> and V<sub>OL</sub> are typical output voltage levels that occur with specified R<sub>L</sub>, C<sub>L</sub>, and S1.

## 9 Parameter Measurement Information(Continued)

**Enable and Disable Times  
Low-And High-Level Enabling**

1. Output waveform on the condition that input is driven to a valid Logic Low.
2. Output waveform on the condition that input is driven to a valid Logic High.
3.  $V_{CC0}$  is the supply pin associated with the output port.
4.  $V_{OH}$  and  $V_{OL}$  are typical output voltage levels with specified  $R_L$ ,  $C_L$ , and  $S1$ .

## 10 Detailed Description

The GTXU0101 is a single-bit translating transceiver that uses two individually configurable power-supply rails. The device is operational with  $V_{CCA}$  and  $V_{CCB}$  supplies as low as 1.65 V and as high as 5.5 V. Additionally, the device can be operated with  $V_{CCA}=V_{CCB}$ . The A port is designed to track  $V_{CCA}$ , and the B port is designed to track  $V_{CCB}$ .

The GTXU0101 device is designed for asynchronous communication between data buses, and transmits data with fixed direction from the A bus to the B bus on some channels and from the B bus to the A bus on the remaining channels. The output-enable input (OE) is used to disable the output so the buses are effectively isolated. The output-enable pin of the GTXU0101 (OE) can be referenced to either  $V_{CCA}$  or  $V_{CCB}$ . The OE pin can be left floating or externally pulled down to ground to ensure the high-impedance state of the level shifter outputs during power up or power down.

This device is fully specified for partial-power-down applications using the  $I_{off}$  current. The  $I_{off}$  protection circuitry ensures that no excessive current is drawn from or sourced into an input or output while the device is powered down.

**Table. 10-1. Function table**

Control Input OE	Port Status		Operation
	Input	Output	
H	L	L	Unidirectional non-inverting voltage translation
H	H	H	Unidirectional non-inverting voltage translation
L	X	Hi-z	Isolation

## 11 Application Note

The GTXU0101 device can be used in level-translation applications for interfacing devices or systems operating at different interface voltages with one another. The GTXU0101 device is ideal for use in applications where a push-pull driver is connected to the data Input. The maximum data rate can be up to 200 Mbps when the device translates a signal from 3.3 V to 5.0 V.

**Fig.11-1. Typical Application Schematic**
